

PROJECT REPORT
MACHUPICCHU NATIONAL ARCHAEOLOGICAL PARK VOLUNTEER TRIP
November 9 - 17, 2023

Executive Summary

ConservationVIP® Volunteers at Machu Picchu

Conservation Volunteers International Program (ConservationVIP®) organized and led a volunteer trip to Machupicchu National Archaeological Park in November 2023 in collaboration with Peru's Ministry of Culture, and the Ministry of Environment (National Service for Protected Area Management, SERNANP). The project was authorized by Anthropologist Maritza Rosa Gandia, Director of the Decentralized Directorate of Culture Cusco - Ministry of Culture, and by Engineer Vladimir Ramirez Prada, Ministry of Environment (National Service for Protected Area Management, SERNANP).

The projects were discussed with archeologist Maria Guadalupe Quiroga Linares, Director of Conservation Area of Machupicchu National Archaeological Park, park biologist Sr. Julio Ochoa Estrada, and his staff Wilber Huillca.

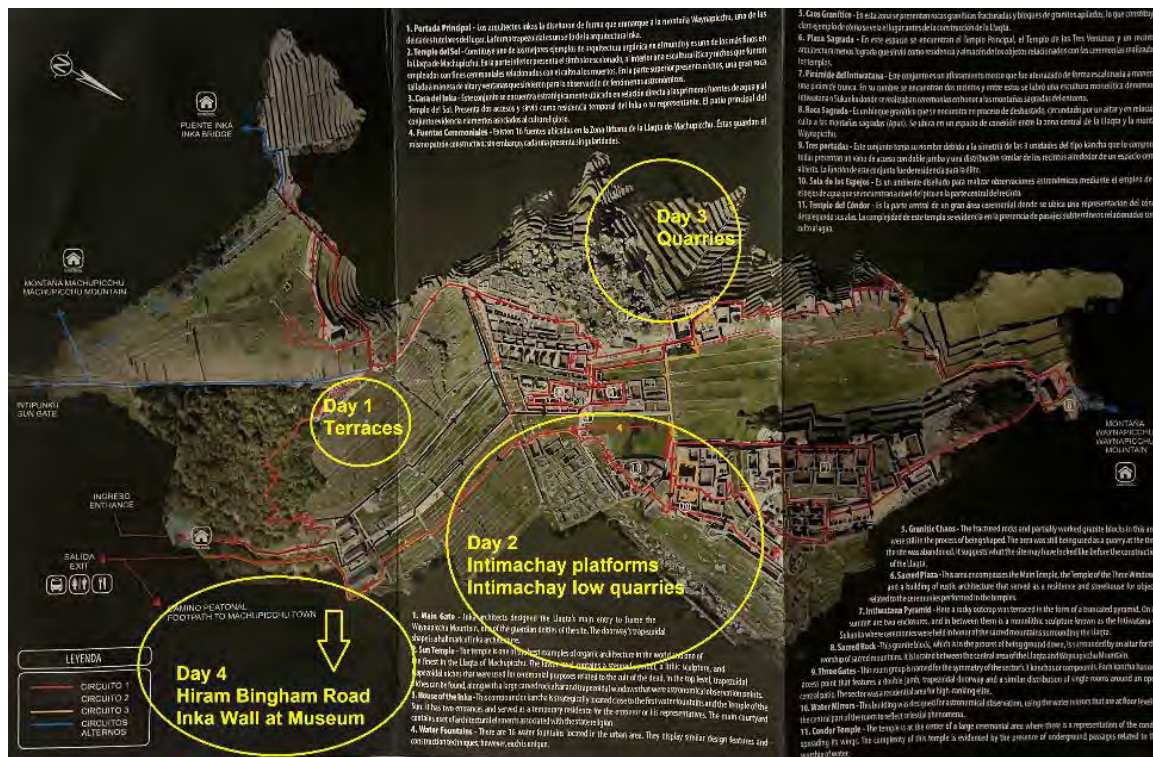

Eight volunteers, including ConservationVIP® Trip Leader Dr. Milagros Flores-Roman and Assistant Trip Leader and Architect Pablo Ojeda O'Neill, and Licenciado Santiago Carrasco Bellota, performed 232 total hours of volunteer work. The primary projects for the ConservationVIP volunteers during the November 2023 trip involved removing non-native grass and other plants in the Machu Picchu National Archaeological Park. Specifically, during the first three days volunteers worked removing non-native grasses at Llaqta of Machupicchu, areas of: terraces, Intimachay platforms and lower quarry, Quarries.

By removing non-native grasses of: pasto gordura (*Melinis minutiflora*), cuchicara (*Peudoelephantopus spiralis* Asteraceae) from multiple locations within the National Archaeological Park, ConservationVIP® volunteers provided an important service to the Ministry of Culture and SERNANP and contributed to the preservation of the natural and cultural environment. *Melinis minutiflora* is particularly adapted to grow quickly in disturbed soils and in areas recently burned by wildfires. The officials at the Machu Picchu National Archaeological Park, and biologist Julio Ochoa Estrada in particular, want to eradicate this invasive species before it can completely replace native species.

The last day was dedicated to volunteering at the site of the Manuel Chávez Ballón Museum Inka wall on the side of the parking, and at the road from the site museum to the Hiram Bingham Road. At the Manuel Chávez Ballón Museum the volunteers cleared “False Kion” or false ginger. This is an invasive species that the group pulled out by the root and placed in bags. Additionally, volunteers assisted the Rangers cleaning an Inca wall in front of the museum of invasive plants that threatened damaging the wall.

During the 232 hours, the volunteers pulled and collected a total of 50 large sacks of non-native vegetation, under the direct supervision of park biologist Sr. Julio Ochoa, and his staff Wilber Huillca Huillca and Safety and Rescue Staff Antonio Sinchiroca Mora.

Trip leaders will provide this report to archeologist Maritza Rosa Candia, Director of the Machupicchu National Archaeological Park, and Eng. Vladimir Ramirez Prada, Ministry of Environment (National Service for Protected Area Management, SERNANP).

Detailed Trip Report

We began in Cuzco, the capital of the Inca Civilization. Volunteers met the Trip Leaders Dr. Milagros Flores-Roman, Architect Pablo Ojeda O'Neill, and Licenciado Santiago Carrasco Bellota at our hotel in the early afternoon for orientation. Later they took a guided tour of the Cuzco Cathedral, then had free time to explore Cuzco on their own. In the evening, the volunteers enjoyed the fine dining of a traditional Peruvian dinner at the Restaurant Artisano Regocijo while enjoying the camaraderie of the volunteer group. The group spent the next one and one-half days acclimatizing and learning about the complex and storied culture of Peru and enjoyed free time to explore on their own, while acclimatizing to the 11,200-foot elevation.

Volunteers visiting the Cuzco Cathedral and enjoying Welcome traditional Peruvian dinner

On November 10, volunteers visited several important sites including the Cuzco Regional Museum, the Qorikancha, and the ancient Inka citadel of Sacsayhuaman for educational purposes to understand the complexity of the Spanish and Inka cultures. In the evening volunteers enjoyed a fine dining at the Restaurant Calle del Medio.

Volunteers at the Inka Citadel of Sacsayhuaman

On November 11, volunteers visited the town of Chinchero at an elevation of 13,500 ft., an indigenous village and former palace of Emperor Topa Inca Yupanqui. There they visited the Inca terraces and remains, a Huaca (Inca shrine), and experienced a short section of the Inca Trail. They visited a weaving cooperative where they learned about traditional Andean weaving techniques and had an opportunity to purchase weavings directly from the weavers before heading to Ollantaytambo to catch the train

to Machu Picchu Pueblo (Aguas Calientes). Upon arrival, the volunteers proceeded to check-in and enjoyed dinner at the Restaurant Toto's House.

Volunteers visiting at Chinchero

On November 12, Volunteers used their entrance tickets to visit Machu Picchu where they were guided by Lic. Santiago Carrasco Bellota about the Inca culture, and preservation issues related to increased visitation as they toured the Sacred City. The volunteers returned that evening to Aguas Calientes and enjoyed a relaxing dinner with traditional Peruvian Music at the Restaurant Mapacho.

Archaeological Site Volunteer Project Description

The primary job for the ConservationVIP volunteers during the November 2023 trip was to continue to reinforce ConservationVIP's long-term commitment to working with the Ministry of Culture and SERNANP to aid in protecting the cultural and environmental resources of the Machupicchu Sanctuary.

The biologist for the Sanctuary, Sr. Julio Ochoa Estrada again requested that the volunteers remove an invasive species of grass, *Melinis minutiflora*, continuing the project which was previously performed by ConservationVIP volunteers. This grass is a native of Africa and has begun to out-compete native species of plants. *Melinis minutiflora* is particularly adapted to grow quickly in disturbed soils and in areas recently burned by wildfires. The grass itself becomes a significant fire hazard once it cures. The officials at the Machu Picchu Sanctuary, and biologist Julio Ochoa Estrada in particular, want to eradicate this invasive species before it can completely replace native species.

On November 13, the group of volunteers from Conservation Volunteers International Program worked at the occidental terraces of the Llaqta of Machu Picchu (Citadel of Machu Picchu). Work consisted of grass control in the several platforms. A total of 8 bags, along an area of 12 terraces, were removed and destroyed by the park staff. At the end of the day, back in Aguas Calientes, the Volunteers enjoyed a relaxing dinner with traditional live Peruvian Music at Restaurant Toto's.

Volunteers working at the Quarries of Machu Pichu

On November 14, the day began with mist covering the Citadel of Machu Pichu along the Inca trail to Intipunku, offering a wonderfully different visual experience of Machupicchu. The designated working area during the morning was at the Intimachay platforms (Sun Cave). During the afternoon we moved to the Intimachay lower quarries area. Along the way it became a delight in the eyes of the volunteers experiencing walking on a path framed by ancient stones full of so much history. A total of 15 bags of "pasta gordura" were removed and destroyed by the park staff. Volunteers enjoyed a traditional Peruvian dinner at the at the SUNU Restaurant.

The challenging weather did not stop the enthusiasm of the volunteers who, with smiles on their faces, enjoyed working along the cliffs of the Intipunku area.

On November 15, volunteers commenced working on the terraces of the Llaqta (Citadel) enjoying one of the most spectacular landscapes in the world. One of the areas designated for removal of the “pasto gordura” was located at the Quarry of the urban sector I subsector “F”, consisting of terraces, each one lower than the other descending to a cliff that drops approximately 1000 ft. down to the Urubamba River. The volunteers worked alongside the sanctuary staff, who provided guidance and ensured that safe working conditions were observed by all. Removal of the “pasto gordura” must be performed by hand, to protect the Inca ruins from damage by mechanical means, and to ensure the root system is destroyed. The use of herbicides in the Machu Picchu Sanctuary is prohibited as the Sanctuary is a UNESCO World Heritage site, and the home to many rare and endangered flora and fauna. A total of nine bags of “pasto gordura” were removed and destroyed by the park staff. At the end of the day, back in Aguas Calientes, the Volunteers enjoyed a relaxing dinner with traditional live Peruvian Music Restaurant Toto’s.

On November 16, the volunteers went to the area of the Manuel Chávez Ballón Museum. Prior to commencing the work on the museum grounds, the volunteer group was invited to visit the Machu Picchu Sanctuary Museo Manuel Chávez Ballón and was then provided a guided tour of the Botanical Garden by Biologist Julio Ochoa Estrada. Work consisted of removal of vegetation from the Inka wall, in the area adjacent to the Manuel Chávez Ballón Site Museum. A total of 12 bags of non-native vegetation were removed. After an intensive day of work, the Volunteers celebrated their work achievement and said good bye to Machu Pichu with an elegant farewell dinner at the Inka Wasi Restaurant.

During the four days of work, the volunteers contributed a total of 232 hours, and collected a total of 50 sacks of non-native vegetation from different areas, including quarries, terraces, platforms, slopes, and Inka walls within the citadel and Museum and Botanical Garden of Machupicchu for a total of area covered of 14,960 square feet.

On November 17, volunteers departed Aguas Calientes on train back to Ollantaytambo where after a stroll through the spectacular ancient Inka city of cobbled streets, water channels and fountains, we arrived at the Ollanta Military Fortress and strategic military zone in defense of the Inca Empire, where the legend of the impossible love of the young warrior, Ollantay, in love with Cusi-Coyllur, daughter of the Inca Pachacútec, was born.

After visiting Ollantaytambo, the group returned by bus to Cusco for a final volunteers farewell group meal and celebration of a successful trip. On November 18, the Machu Picchu Volunteer Trip ended with breakfast.

ConservationVIP® you Rock!

Working in an area of so much meaning is the reason behind this program.

Safe Journey back home to our amazing volunteers.

Acknowledgments

Conservation Volunteers International Program acknowledges and thanks the Ministry of Culture, the Ministry of Environment (National Service for Protected Area Management, SERNANP), and the community of Machu Picchu Pueblo for the privilege of volunteering in Peru. We particularly thank biologist Julio Ochoa Estrada, and his staff, Wilber Huillca Huillca and Antonio Sinchiroca Mora, who spent much of the time working shoulder-to-shoulder with the volunteers. Conservation Volunteers International Program wishes to further acknowledge the support and guidance offered by Director of the Machupicchu National Archaeological Park Maria Guadalupe Quiroga Linares, with whom ConservationVIP looks forward to continuing to work to expand the scope of assistance that ConservationVIP can offer to this unique cultural and environmental site.

Special thanks to Licenciado Santiago Carrasco Bellota, who provided excellent interpretive and environmental information. His work with the Peruvian ministries prior to our arrival was critical in obtaining the necessary permits to carry out our work at the Sanctuary.

Last, but not least, ConservationVIP® thanks our hardworking November 2023 Machu Picchu volunteers, for their efforts to help conserve Machu Picchu for future generations.
